

H.S.Pipeequipment Increases Stock Levels with Valbart Sri Trunnion Mounted Ball Valves

H.S.Pipeequipment (HSP), the market leading valve stockist and distributor to the oil, gas and petrochemical sector has further extended its value offering by increasing their stock levels with the recent arrival of £1m of Valbart Sri (formerly Velan Sri) trunnion mounted ball valves.

The new stock ranges in sizes from 2ins to 10ins with pressure classes from 150 to 1500 bar. They have been manufactured to oil and gas industry specifications and include low temperature carbon steel (ASTM A350 LF2) bodies and internals (e.g. Balls) manufactured from 316 SS and Duplex (ASTM A182 F51) stainless steel.

Valbart Sri are recognised within the global market for producing high quality valves. Their trunnion mounted ball valves are the company's flagship products. This stock will be held at HSP's strategically located Aberdeen warehouse allowing the products to be readily available whilst enhancing the speed and efficiency with which they can be accessed around the globe.

HSP have been successfully operating for 30 years and have become a streamlined supplier of valves to the global oil and gas industry. The company can fulfil orders of any size or complexity, from a single valve to a multi-million pound EPC project. HSP's capability and strengths cover the full supply chain from assisting in the selection and technical evaluation of the ideal application through to order placement, expediting and delivery.

Derrick Mackenzie, General Manager of H.S.Pipeequipment's Aberdeen office comments, "Despite the slow down in Capex investment in the oil and gas industry, HSP continues to grow on the back of operational expenditure (OPEX). Much of this operational (or MRO) spending depends on a rapid response for assistance with technical support as well as product. HSP has an established reputation for excellent

technical support; the new Valbart Sri trunnion mounted ball valves will not only enhance our extensive product portfolio, but it will provide a boost to our position as a leading valve supplier to the sector.”
